Turning Modular actuator

Modular cilinder basics

Cilinder: Static Base cilinder: 40 mm diameter, 5 mm depth

Cilinder: HoleStatic 25 mm diameter, 5 mm depth

// join => Staticcilinder

StepMotor fit

Cube: StepMaxDim: width 32.1, height 22.2, depth 12.2

StepBody: Join ConnectStep & MainBodyStep : CTR+J-key => StepBody

Cube: MainBodyStep: width 23, height: 22.2, depth 12.2

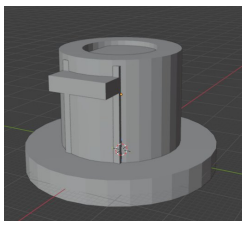

Cube: ConnectStep: width 32.1, height 3, depth 12.2

// connectstep 18.2 <-> 21.2 into height main body

// blender calc begin ConnectStep => 18.2/2 - 3/2 = 9.1-1.5 = 7.6

Print this to compare to stepmotor

Cilinder main

copy Staticcilinder => MotorCilinder

Pas aan properties: diameter 25 mm, hoogte 20 mm

Splits MotorCilinder in 2: Boolean delete + copy

Connectie 2 objecten:

- Clilinder 1: delete
- Cilinder 2: join

Ruimte voor servo:

1. Zet alles op juiste plaats
2. Op elk opject dat servo raakt: delete boolean
